"Distribution and functional significance of Leu-callatostatins in
the blowfly Calliphora vomitoria.",
Cell Tissue Res. 276:367-379(1994)
-!- FUNCTION: MAY ACT AS A NEUROTRANSMITTER OR NEUROMODULATOR AND PLAY
A ROLE IN THE INTERRATION OF INFORMATION WITHIN THE BRAIN MAY BE
INVOLVED IN THE CONTROL OF VISCERAL MUSCLES DUE TO ITS ABILITY TO
BEHAVE AS POTENT INHIBITORS OF PERISTALIC MOVEMENTS. MAY ALSO
FULFILL A NEUROHORMONAL ROLE ON MUSCLES OF THE GUT AND HEART.
-!- TISSUE SPECIFICITY: BRAIN, SUBOESOPHAGEAL GANGLION, RETROCEREBRAL
COMPLEX, THORACICO-ABDOMINAL GANGLION, PERIPHERAL NEUROSECRETORY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

Kim K.-Y., Choi I., Kim S.-S.,
"Purification and characterization of a novel inhibitor of the
proliferation of hepatic stellate cells.";
J. Biochem. 127:23-27(2000)
-!-FUNCTION: MAY ACT AS A NEGATIVE EFFECTOR IN THE REGULATION OF THE
HEPATIC STELLATE CELLS (HSC). ALSO INHIBITS THE GROWTH OF BOVINE
ENDOTHELIAL CELLS AND 376 FIBROBLASTS.
-!- SIMILARITY: IDENTICAL TO THE 63-70 AA REGION OF THE RAT ZAG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  "Mitochondrial DNA evidence and evolution in Varanoidea (Squamata).";

                                                                                                                                                                                                                                               response to luteinising hormone releasing hormone (LHRH). The composition comprises a LHRH-diphtheria toxoid (DT) conjugate adsorbed to an ionic polysaccharide. The LHRH-DT compositions can be used for eliciting an immune response to LHRH, for castrating an animal, for regulating osetrus cycling in a female animal or for inhibiting characteristics induced by the sexual maturation of an animal, e.g. aggression or sexual activity. They can also be used for achieving production gains in livestock, e.g. reduction or elimination of unwanted cygnoclopic characteristics from the meat of livestock. They can also be used for inhibiting the growth of cells which are regulated directly or indirectly by LHRH, e.g. malignant breast cells, malignant prostate cells, malignant ovarian cells, malignant oracines and seed for inhibiting they can also be used for down-regulating the libido of an animal. They can also be used for inhibiting pregnancy, prostate cells. They can also be used for inhibiting pregnancy, prostate cells animal. They can also be used for inhibiting pregnancy, prostate cells animal. They can also be used for inhibiting pregnancy, prostate cells animal. They can also be used for inhibiting pregnancy, prostate compositions induce a more effective immune response against LHRH than the carrier of the LHRH carrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                The present sequence is a peptide fragment of human luteinising hormone releasing hormone (also known as LHRH, GnRH and gonadotrophin releasing hormone). It was used to demonstrate the novel adjuvant of the invention, which has lower reactogenicity then previous compositions. Vaccination of humans and animals against LHRH can be used as a method of fertility control, as well as enabling the control and treatment of fertility the reproductive organs, such as testicular, breast, prostate and ovarian cancers, prostate enlargement and endomerriosis. The composition of the invention contains an anionic macromolecule and a saponin component, the latter of which is an immunostimulant, and it can also be used with other immunogens including soluble protein antigens, peptide haptens conjugated to a carrier protein and whole viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents luteinising hormone releasing hormone (LHRH). It is used in vaccines with T helper cell epitopes AAB08076-808101, derived from canine distemper virus (CDV). Compositions comprising these T cell helper epitopes are useful for inducing an immune response in an animal. The epitopes are useful as components of animal, in particular, canine vaccines, either simply as synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel T helper cell epitopes derived from canine distemper virus useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Amino acid sequence of truncated luteinising hormone releasing hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidy) and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases the action of peptidases to increase length of activity (half intracellular uptase and interference with physiological processes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a product comprising a proliferatively active moiety (PAM) linked to nucleic acid material which is associated with a protective material. The PAM product is useful for manufacturing a medicament for treating e.g. an autoimmune disease, transplant rejection, retroviral disease, graft-versus-host-disease, or lymphoproliferative disease, comprising cells bearing a high affinity receptor for PAM. The present sequence is a peptide of gonadotropin-releasing hormone (GDRH). GRHH is a peptide hormone, which has high-affinity receptors, and therefore can be used in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GnRH-III; autoimmune disease; transplant rejection; retroviral disease; graft-versus-host-disease; lymphoproliferative disease; gonadotropin-releasing hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel product comprising proliferatively active moiety linked to genetic material, useful as vectors for protected nucleic acid material and as mitogen to stimulate proliferation of target cell -

The present invention describes a pharmaceurical composition (1) to the present invention describes a pharmaceurical composition (1) to treating breast cancer, endometriosis, myometrium tumour, Alzhaimer's disease, circulatory system disorders, menopausal disorders, irregular confectorations, cancer metastasis, premenstrual syndrome, muscular distress or osteopathies due to calcium/phosphorus imbalance. (1) comprises a consider of considering the selective cestrogen control of considering the selective cestrogen control of considering muscular and osteopathic neuroprotective, cardiovascular, andocrine, muscular and osteopathic activities. (1) can be used as GnRH agonists used in combination with controlive oestrogen receptor modulators, selective androgen receptor modulators, sex hormone synthesis inhibitors, lyase inhibitors, controlive oestrogen receptor controlive oestrogen receptor modulators, bone metabolism regulators, receptor receptor-type tyrosine kinase inhibitors, bone metabolism regulators, antagonists for treating and preventing endometriosis, myometrium tumour, cirregular periods, cancer metastasis, premenstrual syndrome, muscular distress, osteopathies due to calcium/phosphorus imbalance, prostatomegally or prostate cancer or breast cancer or their reccurrence conferences, cancer activity and/or reducing side effects. The present sequence cor represents a GnRH agonist related peptide which is given in the present
                                                                                                  Gonadotrophin releasing hormone agonist; GnRH agonist; combination drug; pharmaceutical; breast cancer; endometriosis; myometrium tumour; Alzheimer's disease; circulatory system disorder; menopausal disorder; irregular period; cancer metastasis; premenstrual syndrome; osteopathy; muscular distress; calcum/phosphorus imbalance; SERM; gynaecological; selective oestrogen receptor modulator; cytostatic; nootropic; muscular; neuroprotective; cardiovascular; endocrine; osteopathic; prostatomegally;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pharmaceutical composition e.g. for breast cancer comprises gonadotrophin releasing hormone agonist and selective estrogen receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present invention describes a pharmaceutical composition (1) for
                                                 Gonadotrophin releasing hormone agonist gonadrelin peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 52; DB 24;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a leastive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half if and specificity as bonding to large molecules decreases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

caused by inadequate secretion of endogenous parathormone (PTH) which contains, apart from an acceptable carrier, gonadoliberin or agonists at least as strongly active as gonadoliberin. For parenteral use these provide 0.5-5 micrograms gonadoliberin per unit dose, and for application to mucosa (intranasally) 10-200 micrograms (Updated on 03-0CT-2002 to add missing OS field.)
                                                                                                                                                                                                                      /label= bonded to -NHCH3, -NH-CH2-CH3, -NH-CH2CH2CH3

                                                                                                                                                                                                                                                                                                                                                                                                                            Luteinising hormone releasing hormone (LH-RH) related peptide SEQ ID:146.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity
                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                            Protection; endogenous therapeutic peptide; peptidase; conjugation; blood component; modification; succinimidyl; maleimido group; amino; hydroxyl; thiol; hormone; growth factor; neurotransmitter.
                                                                                                                                                                    A seabream pitutary extract was subjected to HPLC. A fraction showing gonadotropin releasing hormone (GRRH) activity was subjected to pyroglutamyl aminopeptidase digestion and the peptide obtd. (AAR97760) was sequenced. Based on the novelty of the Ser residue at position 8, this peptide was named sbGnRH-I (see also AAR97757). sbGnRH is useful for controlling reproduction in fish.
                                                                                                                      Novel seabream gonadotropin-releasing hormone and its analogues useful for controlling gonadal development and spawning in fish
                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Thibaudeau K;

comprising a thereby description described among a comprising a thereby described by the comprising a thereby described by the comprising a thereby described by the comprising a less therapeutically active amino acid region (III) and a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide components to form a peptidase stabilised therapeutic peptides of 3-50 amino acids. (I) are useful for modifying therapeutic peptides of 3-50 amino acids. (I) are useful for modifying therapeutic peptides of hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides as they require frequent administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes.

MAB90891 to AAB92441 represent peptides which can be used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/haroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity; in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent oppidas are not suitable as drug candidates in the body.

Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases in the action of peptidases to increase length of activity (half intracellular uptake and interference with physiological processes.

ARB90829 to AAB92441 represent poptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gonadotrophin releasing hormone agonist; GnRH agonist; combination drug; pharmaceutical; breast cancer; endometriosis; myometrium tumour; Alzheimer's disease; circulatory system disorder; menopausal disorder; irregular period; cancer metastasis; premenstrual syndrome; osteopathy; muscular distress; calcium/phosphorus imbalance; SERM; gynaecological; selective oestrogen receptor modulator; cytostatic; nootropic; muscular; neuroprotective; cardiovascular; endocrine; osteopathic; prostatomegally;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a pharmaceutical composition (1) for treating breast cancer, endometriosis, myometrium tumour, Alaheimer's disease, circulatory system discorders, menopausal disorders, irregular periods, cancer metastasis, premenstrual syndrome, muscular distress or osteopathies due to calcium/phosphorus imbalance. (1) comprises a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pharmaceutical composition e.g. for breast cancer comprises gonadotrophin releasing hormone agonist and selective estrogen receptor

receptor modulator (SERM). (I) has cytostatic, gynaecological, nootropic, neuroprotective, cardiovascular, endocrine, muscular and osteopathic neuroprotective, cardiovascular, endocrine, muscular and osteopathic cartivities. (I) can be used as GRRH agonists used in combination with selective cestrogen receptor modulators, selective androgen receptor modulators, selective androgen receptor captures is inhibitors, lyase inhibitors, creeptor-type tyrosine kinase inhibitors, bone metabolism regulators, immunotherapy drugs, cytokine/chemokine inhibitors or endothelin receptor antagonists for treating and preventing endometriosis, myometrium tumour, all zhaimer's disease, circulatory system disorders, menopausal disorders, irregular periods, cancer metastasis, premenstrual syndrome, muscular distress, osteopathies due to calcium/phosphorus imbalance, prostatomegally or prostate cancer or breast cancer or their reoccurrence or metastasis. Combination enhances the quality of life by enhancing GRRH agonist activity and/or reducing side effects. The present sequence represents a GRRH agonist related peptide which is given in the present
                                                                                                                                                                                                                                                                                                                                                                                                                             ö
gonadotrophin releasing hormone (GnRH) agonist and a selective oestrogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Agent for preventing post-operative recurrence of premenopausal breast cancer contains GRRH agonists or antagonists -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an agent containing gonadotrophin releasing hormone (GnRH) agonists or antagonists. GnRH agonist and antagonists have cytostatic activity. The agent can be used for preventing post-operative recurrence of premenopausal breast cancer. The agents have no serious side effects with sustained drug effect over a long period without frequent administration. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "Pro is C-terminally modified with -NHCH2CH3"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an agent comprising a neurotoxin preferably botulinum toxin for treating endocrine disorders for e.g. gonadotrophin related illness. The agent is useful for treating gonadotrophin related illness e.g. prostate cancer, endometrial cancer, pancreatic cancer, breast cancer, andometriciosis or precocious puberty. It is also useful for decreasing gonadotrophin secretion in a mammal. The present sequence is gonadotrophin releasing hormone analogue (GRNH-A).

Patent No. US20020068276A1

GENERAL INFORMATION:

APPLICANT: Winter, Greg

APPLICANT: Winter, Greg

TITLE OF INVENTION: Methods for Selecting Functional Peptides

FILE REPERENCE: 3789/72916

CURRENT APPLICATION NUMBER: US/09/192,854

CURRENT FILING DATE: 1998-11-17

EARLIER APPLICATION NUMBER: 60/066,729

EARLIER FILING DATE: 1997-11-21

NUMBER OF SEQ ID NOS: 2.22

SOUTHARE PATENTIN VET: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ..

Sequence 10, Application US/0945043E

Patent No. 6566402

GENERAL INFORMATION:

APPLICANT: DELANSORNE, Remi

APPLICANT: DELANSORNE, Remi

TITLE OF INVENTION: LH-RH peptide analogues, their uses and pharmaceutical

TITLE OF INVENTION: LW-RH peptide analogues, their uses and pharmaceutical

TITLE OF INVENTION: LW-RH peptide analogues, their uses and pharmaceutical

TITLE OF INVENTION: LW-RH peptide analogues, their uses and pharmaceutical

FILE REFERENCE: 12058-405

CURRENT APPLICATION NUMBER: US/09/450,443E

CURRENT APPLICATION NUMBER: PCT/EP98/02802

PRIOR FILING DATE: 1998-05-06

PRIOR FILING DATE: 1997-06-02

NUMBER OF SEQ ID NOS: 39

Conjugates of the peptide with an immunogenic carrier protein can be used as an anti-LHRH vaccine. (An alpha-globulin/LHRH conjugate can also be used as anti-LHRH vaccine). The vaccines are administered shortly before slaughter to suppress the action of androgenia c and non-androgenic hormones in non-castrated male animals. This allows the advantages associated with the male character (greater weight gain, more efficient feed utilisation and
                                                                                                                                                                                                                                                                                                                                                        Immunoneutralisation; luteinising hormone releasing hormone; GnRH;

The invention relates immunogenic composition for eliciting an immune response to luteinising hormone releasing hormone (LHRH). The composition comprises a LHRH-diphtheria toxoid (DT) conjugate adsorbed to an ionic polygaccharide. The LHRH-DT compositions can be used for eliciting an immune response to LHRH, for castrating an animal, for regulating osertus cycling in a female animal or for inhibiting characteristics induced by the sexual maturation of an animal, e.g. aggression or sexual activity. They can also be used for achieving corpanolophic characteristics from the meat of livestock. They can also be used for inhibiting the growth of cells which are regulated directly or used for inhibiting the growth of cells which are regulated directly or indirectly by LHRH, e.g. malignant breast cells, malignant covarian cells, malignant concocetal cells or hyperplastic cells. They can also be used for down-regulating the libido of an animal. They can also be used for inhibiting pregnancy, prostate cells animal. They can also be used for inhibiting pregnancy, prostate cells animal. They can also be used for inhibiting pregnancy, prostate cells animal andometriosis or inhibiting pregonses. The LHRH compositions induce a more effective immune response against LHRH than
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LHRH; immune response; luteinising hormone releasing hormone; DT; diphtheria toxoid; castrating; oestrus cycling; aggression; breast; sexual activity; organoleptic; livestock; cell growth; malignant; prostate; ovarian; oncofoetal; hyperplastic; pregnancy; endometriosis; inflammatory response.
leaber carcasses) to be retained practically up to the time of slaughter. The treatment does not induce any local reactions which could result in the meat being rejected on grounds of quality. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New immunogenic leutenising hormone releasing hormone compositions comprise LHRH conjugated to diphtheria toxoid and adsorbed to an ionic polysaccharide, used to inhibit reproductive function in animals

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a peptide fragment of human luteinising hormone releasing hormone (also known as LHRH, GnRH and gonadotrophin releasing hormone). It was used to demonstrate the novel adjuvant of the invention, which has lower reactogenicity then previous compositions. Vaccination of humans and animals against LHRH can be used as a method of fertility control, as well as enabling the control and treatment of disorders of the reproductive organs, such as testicular, breast, prostate and ovarian cancers, prostate enlargement and endometriosis. The composition of the larter of which is an immunostimulant, and it can also be used with other immunogens including soluble protein antigens, peptide haptens conjugated to a carrier protein and whole viruses.

Gonadotrophin releasing hormone agonist; GnRH agonist; combination drug;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence is that of a luteinising hormone releasing hormone (LHRH) peptide which can be used as part of a self adjuvanating vaccine for raising antibodies to the LHRH peptide. The vaccine may be used in the chemical sterilisation of animals and for treating breast, prostate, endometrial and ovarian cancer. Using peptide epitopes of AIDS, malaria, influenza, hepatitis or zona pellucida the vaccine can be used to enhance the immune response of an animal to the antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a pharmaceutical composition (1) for treating breast cancer, endometriosis, myometrium tumour, Alzheimer's disease, circulatory system disorders, irregular disease, circulatory system disorders, irregular disease, circulatory system disorders, irregular periods cancer metastasis, premenstrual syndrome, muscular distress or osteopathies due to calcium/phosphorus imbalance. (1) comprises a confectrophin releasing hormone (GRRM) agonist and a selective osetrogen receptor modulator (SERM). (1) has cytostatic, gynaecological, nootropic, neuroprotective, cardiovascular, endocrine, muscular and osteopathic activities. (1) can be used as GRRH agonists used in combination with selective osetrogen receptor modulators, selective androgen receptor modulators, selective androgen receptor modulators, lyase inhibitors, receptor-type tyrosine kinase inhibitors, lyase inhibitors, receptor entegonise kinase inhibitors, lyase inhibitors, receptor treating and preventing endomertiosis myometrium tumour, antagonists for treating and preventing endomertiosis, myometrium tumour, are disease, circulatory system disorders, menopausal disorders, irregular periods, cancer metastasis, premenstrual syndrome, muscular distress, osteopathies due to calcium/phosphorus imbalance, prostate cancer cor breast cancer or their reoccurrence or metastasis. Combination enhances the quality of life by enhancing cor metastasis. Combination enhances the quality of life by enhancing correspondent agonist related peptide which is given in the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        П
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ****
```

```
Luteinising hormone releasing hormone (LH-RH) related peptide SEQ ID:156.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence is that of a luteinising hormone releasing hormone (LHRH) peptide which can be used as part of a self adjuvanating vaccine for raising antibodies to the LHRH peptide. The vaccine may be used in the chemical sterilisation of animals and for treating breast, prosester, endometrial and ovarian cancer. Using peptide epitopes of AIDS, malaria, influenza, hepatitis or zona pellucida the vaccine can be used to enhance the immune response of an animal to the antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           임
                                                                                                                                                                                                                                                                                    The present invention describes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth a cactors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases. ABB90829 to ABB92411 represent invention.

                                                                                                                                                                                ö
peptidase stabilised therapeutic peptide composed of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and inteference with physiological processes. AAB90829 to AAB2241 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This is one of 57 specific examples of highly generic reduced size LHRH analogues. It is based on amino acid residues 3 to 9 of natural LHRH. The analogues can be used for treating diseases
                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Reduced size Pseudo peptide LHRH analogues - used as LHRH agonists or antagonists eg in treatment of prostate cancer and benign prostatic hypertrophy
                                                                                                                                                                                                                                                                                                                                                               Leutinizing hormone releasing hormone; pseudopeptide; agonist;
                                                                                                                                                                                                                                                                                                                                                                                                                                    label= N-3-(4-fluorophenyl)propionyl-D-Trp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is one of 57 specific examples of highly generic reduced size LHRH analogues. It is based on amino acid residues 3 to 9 of natural LHRH. The analogues can be used for treating diseases resulting from gonadal hormone over or under-production in either sex, controlling reproduction, as fertility promoters when administered in pulses or for reducing dihydrotestosterone levels. See also AAR11089-R11091 and AAR11093-4.
resulting from gonadal hormone over- or under-production in either sex, controlling reproduction, as fertility promoters when administered in pulses or for reducing dihydrotestosterone levels. See also AAR11089-R11090 and AAR11092-4.

polymer;

Luteinizing hormone-releasing hormone; LH-RH; cytostatic; gynaecologizal; sustained release microsphere; biodegradable polymer hormone dependent disease; pancreatic cancer; prostatic hypertrophy; breast cancer; endometriosis; myome of the uterus;

neurogenic precocious puberty; contraceptive; deslorelin

Location/Qualifiers

Luteinizing hormone-releasing hormone (LH-RH) agonist, deslorelin.

(first entry)

It is based on amino acid residues 2 to 9 of natural LHRH. The analogues can be used for treating diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            resulting from gonadal hormone over- or under-production in either sex, controlling reproduction, as fertility promoters when administered in pulses or for reducing dihydrotestosterone levels. The intention describes a subtained release intropher invention describes as substance and a biodegradable polymer, obtained by subjecting a water/oil/water or oil/water emulsion to an in-water drying under particular conditions. The physiologically active substance is in an inner aqueous phase and the biodegradable polymer is in an external oil phase. The sustained release microsphere is useful as a preparation for treatment or prophylaxis of hormone dependent diseases such as pancreatic cancer, prostatic hypertrophy, breast cancer, a contraceptive. The method increases the rate of solvent removal from microspheres, reducing the amount of solvent in microspheres in a short time and markedly improves the drug entrapment ratio in microspheres by subjecting the microspheres are excellent in toxicity and can be used safely. Microspheres are excellent in contactity at the time of collection and in dispersibility and needle passability when they are used as a medicinal injectable preparation. This sequence represents a peptide agonist of the luteinizing contacts the contact of the creation of microspheres.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Production of a sustained-release microsphere having physiologically active substance and a biodegradable polymer involves subjecting a water/oil/water or oil/water emulsion to an in-water drying under particular conditions

treating breast cancer, dedometriosis, grometrium tumour, Alzheimer's disease, circulatory system disorders, menopausal disorders, irregular periods, cancer metastasis, premenstrual syndrome, muscular distress or osteopathies due to calcium/phosphorus imbalance. (I) comprises a gonadotrophin releasing hormone (GRRH) agonist and a selective oestrogen receptor modulator (SERM). (I) has cytostatic, gynaccological, nootropic, neuroprotective, cardiovascular, endocrine, muscular and osteopathic activities. (I) can be used as GMRH agonists used in combination with selective oestrogen receptor modulators, selective androgen receptor modulators, sex hormone synthesis inhibitors, lyase inhibitors, receptor-type tyrosine kinase inhibitors, bone metabolism requiators, antagonists for treating and preventing endometriosis, myometrium tumour, antagonists for treating and preventing endometriosis, myometrium tumour, irregular periods, cancer metastasis, premenstrual syndrome, muscular distress, osteopathies due to calcium/phosphorus imbalance,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    prostatomegally or prostate cancer or breast cancer or their reoccurrence or metastasis. Combination enhances the quality of life by enhancing GnRH agonist activity and/or reducing side effects. The present sequence represents a GnRH agonist related peptide which is given in the present
                                                                                                                                                                                                                                                                                                                       Gonadotrophin releasing hormone agonist; GnRH agonist; combination drug; pharmaceutical; breast cancer; endometriosis; myometrium tumour; Alzheimer's disease; circulatory system disorder; menopausal disorder; irregular period; cancer metastasis; premenstrual syndrome; osteopathy; muscular distress; calcium/phosphorus imbalance; SERM; gynaecological; selective oestrogen receptor modulator; cytostatic; nootropic; muscular; neuroprotective; cardiovascular; endocrine; osteopathic; prostatomegally;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Duve H., Thorpe A.;

"Distribution and functional significance of Leu-callatostatins in "Distribution and functional";

[the blowfly Calliphora vomitoria",

[cell Tissue Res. 276:367-379(1994)]

-!- FUNCTION: MAY ACT AS A NEUROTRANSHITTER OR NEUROMODULATOR AND PLAY A ROLE IN THE INTEGRATION OF INFORMATION WITHIN THE BRAIN. MAY BE INVOLVED IN THE COMTROL OF VISCERAL MUSCLES DUE TO ITS ABILITY TO BEHAVE AS POTENT INHIBITORS OF PERISTALIC MOVEMENTS. MAY ALSO FULFILL A NEUROPROMONAL ROLE ON WISCLES OF THE GUT AND HEART.

-!- TISSUE SPECIFICITY: BRAIN, SUBORESOPHAGEAL GANGLION, RETROCEREBRAL COMPLEX. THORACICO-ABDOMINAL GANGLION, PERIPHERAL NEUROSECRETORY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Calliphora vomitoria (Blue blowfly).
